

Synel for Parking

Put order into your parking zone

Granting entrance to authorized employees' and visitors' vehicles, and preventing others from entering the parking area is one of the organization's major concerns.

Synel's parking management and control solution cater for both barrier activation and drivers identification, to make sure only authorized vehicles driven by recognized drivers can enter the premises.

In the event of a communal parking lot used by a number of companies, the system enables easy and efficient management of entries and exits, with the ability to limit the number of parking spaces on a first-come-first-serve basis, thus preventing vehicles from entering when all parking spaces are occupied.

The system can also identify which company the vehicle belongs to, how many spaces are allocated for that company, and prevent further entries from a specific company in the event of all its spaces have been occupied.

Badge reading distance can vary from a few cm and up to 15 meters with an active reader.

Readers are connected via SY-400 controller to Falcon PRO access control system.

Benefits

- **Increased security**
- **Improved employee / visitor satisfaction**
- **A wide range of reading distances is available**
- **Perfect for simple entry / exit**
- **The access control application where durability and reliability count the most**
- **Wireless automatic vehicle identification**
- **Radio frequency vehicle identification**

Partial list of parking projects

- **Siemens - Istanbul, Turkey**
- **Sinopec - Beijing, China**
- **Oil refineries, BZN - Haifa, Israel**
- **Prime Minister's office - Israel**
- **I.A.I. - Israel**
