

Portable Terminals for Mobile Reporting

Synel introduces portable terminals solution - the easy and most convenient way to collect data for attendance registering purposes, where no infrastructure or communications are available.

The casing is IP67 rated - provides protection against dust, water, impacts, corrosion or chemical agents.

This specially designed sealed portable suitcase is intended for temporary and mobile use.

The sealed IP67 rated casing is dust and water proof, and is equipped with a flight safety switch, which ensures a balanced air pressure during flight.

The mobile terminals are ideal for:

- Construction or demolition sites
- Temporary school camps
- Sports venues
- Military field bases
- Mobile groups (orchestras, seminars, and other events) military, nautical, police, and much more....

The portable SY-765 or SY-785 terminals enable collecting data in a remote location and downloading it into the organization's headquarters' PC in the central office.

Both fingerprint enrolment and identification processes can be done directly at the terminal, and the back up battery enables 4 to 8 hours of full operational mode.

Dimensions (mm):

Internal: 380x265x150

External: 405x330x165

Weight:

Empty: 2 kg

With terminal: 4 kg

Temperature: -40° - 80°

Communication types: Tested for:

- Serial modem

- Networked TCP/IP

- GSM mobile

- GPRS

- Wireless (Wi-Fi)

- Drop

- Impact

- Handle

- Watertight Integrity

- UV color & material protection

Approvals:

- ATA300

- IP67

- STANAG 4280

- DS 81-41
