

Synel for Remote Locations

Connect and control anywhere, anytime

Organizations with multiple sites across vast areas of the country or continent can highly benefit from solutions which enable online attendance monitoring and tracking, in cases where infrastructure facilities are too expensive, difficult or impossible to set up.

This unique solution enables the use and communication of data collection terminals through advanced wireless technologies such as: GPRS and GPS modems, Wi-Fi communication, portable terminals (installed in sealed dust-proof, wet-proof special suitcases with battery power supply).

Data is transferred in real-time to the center of the organization, and enables online viewing and analyzing of the information received.

Solution is applicable for SY-7XX terminals and SY-400 controllers.

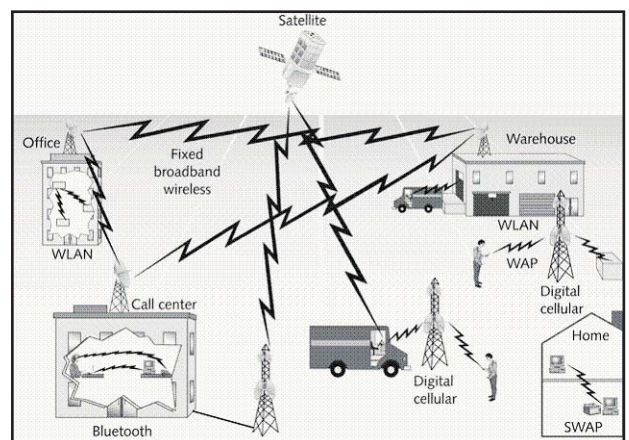

Particularly useful for:

- **Construction or demolition sites**
- **Temporary school camps**
- **Sports venues**
- **Military field bases**
- **Traveling groups (orchestras, seminars, and other events)**

Benefits

- **Perfect for those cases in which it is impossible or impractical to lay cables or set up complete infrastructure**
- **Wireless applications are found in wide variety of industries and organizations**
- **Mobility or freedom to move without being connected by cables - terminal is internally battery backed up**
- **Easier and less expensive installation, increased network reliability, and support for disaster recovery**
- **May be installed inside vehicles**
- **Information is transferred in real time for the purpose of viewing and analyzing**
- **Terminals can be easily transferred from one location to another**

Time & Attendance
