Using HARMONY Demo server
16th lesson
Enter the HARMONY Client
use the user name and password provided by the tech team

Password Authentication

HARMONY has the ability to authenticate users according to the internal HARMONY
user and password set in the system, or the organization Active directory.

To set the authentication method you need to activate HarmonySrv_Gui.exe then
click on the authentication tab.

If you select the **HARMONY** type of authentication then no further information
is required. The login for Harmony users can be stored at the Harmony Server
or in Windows WinNT active directory. If you select one of the **Active Directory**
options you also need to define which
Directory Service you want to use: **WinNT** or **LDAP**.

Figure 1: Authentication Window
(Right-click the Harmony Server icon and Select "Open Harmony Server Service")

Setting-up Password Authentication

First decide what type of authentication you want to use, Harmony
or Active Directory according to the table below.

Type	HARMONY	Active directory with user and password	Active directory with station login user and profile
Password Stored in:	Employee Record on the Harmony	WinNT Active Directory	WinNT Active Directory
How does user login?	Login to Harmony with password stored in the Employee Record	Login to the network and then to Harmony	Login to the network only
Directory Service?	No	Yes	Yes
User Login Window	Figure 2: Login Using Harmony Authentication	Figure 3: Login Using Active Directory Authentication	

Setting-up a Directory Service (for Active Directory Authentication)

1. Click the Connect button to connect to the active directory you are using.
   The directory data will be displayed on the left-hand side of the window.
2. Click the ... (ellipsis) button of the **Link field name** option to view the list of
   active directory filenames.
3. Find a field name that is available in the active directory and insert the
   Harmony employee num¬ber in that field for all employees.
   Link field name - Displays the link field name.
   Link field value - Displays the value entered for the link field.

See you in the next lesson..
