SYNEL CASE STUDY:

City of London School – Enhancing security and tracking attendance

'Synel are an outstanding company to work with. The installation team were excellent throughout the project: hard working, straight forward to deal with and very quick to understand our requirements. We have ended up with a great solution that we plan to expand upon as our needs develop.' **IT Systems Manager of the school, Joe Matthews**

Synel is an enterprise partner & integrator with iSAMS. Synel Education solutions fully integrate with iSAMS management information system, one of the leading education platforms in the UK market. iSAMS has a modular architecture, which enables schools to build their own system and grow with it, rather than grow into it. Synel solutions provide the same modular philosophy thus being totally flexible and adjustable to the customers' needs.

Staff number: 200 **Pupils:** 918 **Special Features:** Edu-Reg web based suite

Assisting School increase security, ensure safety and track attendance

City of London School in the heart of the Square Mile. It is a City school in the truest sense, benefitting from the diversity and richness of the communities around it and from the wealth of opportunity brought to it by association with the City of London Corporation and the proximity to some of the world's most important cultural, financial and business operations.

It is a truly vibrant community, with a strong sense of ambition and breadth of vision. The education the school espouses is broad and all-encompassing, giving boys the skills and understanding to think and act for themselves, to engage positively with those around them, to enjoy the opportunities the world offers and to approach the challenges of life with confidence.

New Wireless Secured Doors

- **Edureg** system enhanced the security in the external part of the building. The doors were secured with conventional mechanical locks and all problems with key control were eliminated.

The system provided real time information of all the people who were on site at any time therefore improving the security. The administration costs were reduced due to the integration of the new system with the school's MIS.

The hybrid standard and Wi-Fi access control solution of Synel UK, for internal and external doors and gates ensured the most cost effective solution yet with highest quality and security levels.

The results

The Synel team had to overcome operations complications on-site which are common in large organisations such as CLS. Some examples of these complications were the very tight no fail deadline, a great number of doors and gates, the integration of standard & Wi-Fi solutions in three different perimeters of the building and co-operating with other third party suppliers. Synel's professional team was extremely efficient, fast and managed to overcome all obstacles and deliver the project on time just in time for the September term.

City of London School were impressed with Synel's performance.

Synel Intercom

They are now enjoying the following benefits of Edu-Reg:

- Electronic Registration
- Access control
- Cashless Meals & Payments solution
- Visitor Management
- Fire roll and attendance in premises
- Integration with iSAMS

Above all, the school increased security at a very sensitive and central location full of traffic and tourists, ensured pupils and staff safety and tracked their attendance in premises.
